Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

\* In case of silicate paint CT 54 these colours are not available.

☀ Light reflectance value / HBW (LRV)

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW  $\geq$  20 and total solar reflection value TSR  $\geq$  20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

## Grey Vibes

A collection of various shades of grey works together perfectly with any color, giving the space a universal and timeless style.

The color library features the following Ceresit products: acrylic, silicone, silicate, silicate-silicone, silico-elastomer, elastomer plasters, and acrylic, silicone and silicate paints. Due to digital techniques and individual monitor settings, displayed colors may slightly differ from actual ones.

Intense & Expressive Colors are intended for CT 79 elastomer and CT 76 Solar Protect silico-elastomer renders by Ceresit.

Light Reflectance Value / HBW (LRV)

HBW (LRV) – Measures visible light reflection (% of solar radiation reflected from a surface).

TSR – Total Solar Reflectance (%) for UV, visible, and infrared light, ie. the amount of solar radiation across the full spectrum that is reflected. This coefficient pertains to light waves in the ultraviolet, visible, and infrared ranges.

To ensure facade durability and prevent excessive heating, use plasters and paints with HBW≥20. For HBW below 20, consult Ceresit's technical department for help with choosing the appropriate insulation system.

# Harmonious & Balanced

If you like all greens, beiges and whites, you will find it here.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

\*In case of silicate paint CT 54 these colours are not available.

Light reflectance value / HBW (LRV)

**HBW (LRV)** – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

**TSR** – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

## Romantic & Delicate

Here you will find dirty beiges, blurry grays and delicate browns.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

\*In case of silicate paint CT 54 these colours are not available.

 Light reflectance value / HBW (LRV)

**HBW (LRV)** – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

**TSR** – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW  $\geq 20$  and total solar reflection value TSR  $\geq 20$ . If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

## Energetic & Positive

Here you will find all range of energetic colours – from yellows and reds through oranges and browns to blue hues.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented above refer to plasters and paints offered by Ceresit. These are acrylic, silicate-silicone, silicone, silicate, elastomeric, silico-elastomeric plasters and acrylic, silicone, silicate paints.

\* In case of silicate paint CT 54 these colours are not available.

 Light reflectance value / HBW (LRV)

**HBW (LRV)** – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

**TSR** – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW  $\geq 20$  and total solar reflection value TSR  $\geq 20$ . If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.

Due to the digital techniques presented colours of all lines might not represent the original ones, thus they cannot be consider as reliable colour presentation. We recommend to check the authentic colour samples in distribution points.

The colours presented from Intense & Expressive line are designed for CT 79 Elastomeric plaster and CT 76 silico-elastomeric Solar Protect plaster offered by Ceresit.

✨ Light reflectance value / HBW (LRV)

HBW (LRV) – light reflection coefficient (the percentage of visible radiation reflected from the surface). The LRV covers the range of visible light.

TSR – total solar energy reflectance (percentage of solar radiation in the full range, reflected from the surface). The factor relates to the light wave in the ultraviolet, visible and infrared ranges.

To secure long-lasting durability of the façade and to prevent excessive heating of the surface, it is recommended to use finish coats (plasters & paints) with a light reflection value HBW ≥ 20 and total solar reflection value TSR ≥ 20. If one of the factors is lower than 20 please contact Technical Customer Support Department to customize a solution. Current plasters and paints prices are available at the local distributors of Ceresit.
